

For the purposes of this Schedule, the values indicated apply to a facility housing only one animal.

To calculate the minimum sizes of a facility housing a number of animals (D_{minimum}) referred to in tables A to D, the values applicable to the animal requiring the largest surface and the greatest volume in accordance with the provisions of those tables (V_{largest}) must be considered, to which 50% of applicable values is added to each of the other animals housed in that facility ($V_{\text{animal 1}}, V_{\text{animal 2}}, V_{\text{animal 3}}, V_{\text{animal 4}}, V_{\text{etc.}}$):

$$D_{\text{minimum}} = V_{\text{larger}} + (0.5 \times V_{\text{animal 2}}) + (0.5 \times V_{\text{animal 3}}) + (0.5 \times V_{\text{animal 4}}) + (0.5 \times V_{\text{etc.}})$$

Where a facility houses a number of animals referred to in table E, the minimum sizes (D_{minimum}) of the facility are calculated by adding all the values applicable to each animal kept therein ($V_{\text{animal 1}}, V_{\text{animal 2}}, V_{\text{animal 3}}, V_{\text{etc.}}$):

$$D_{\text{minimum}} = V_{\text{animal 1}} + V_{\text{animal 2}} + V_{\text{animal 3}} + V_{\text{etc.}}$$

For the purposes of this Schedule,

- “SCL” means straight carapace length;
- “SVL” means snout-vent length;
- “STL” means snout-tail length;
- “n/a” means not applicable;
- “n/s” means not specified;
- “SWG” means specimen weight in grams.
